Anqi Tan

Ph.D. Student, Bioengineering · Seeking 2027 Internship in AI & Data for Health

Urbana, IL | anqitan2@illinois.edu | anqitan.github.io | LinkedIn | Google Scholar

Builds data pipelines and LLM tools around real biomedical devices and human-sample data; 1st place, Ashby Prize Computational Science Hackathon (2025). Available May–Aug 2027 (on-site or remote) and part-time remote during the school year.

EDUCATION

Ph.D. in Bioengineering, University of Illinois Urbana-Champaign Aug 2022 – Expected Dec 2027
Advisor: Prof. Brian T. Cunningham · Nanosensors Group

B.S. in Mechanical Engineering (dual degree), UIUC & Zhejiang University Aug 2018 – Jun 2022

EXPERIENCE

Graduate Research Assistant, Nanosensors Group, UIUC Sep 2022 – Present

- Built the image-analysis pipeline for a pocket-size fluorescence reader (**automated test/control-line detection, background correction, 4PL calibration**) that turns phone-captured strip images into cortisol concentrations inside an Android app (Kotlin).
- Lead the Live Hormone project: a salivary cortisol lateral flow test (**LOD ≤0.12 ng/mL**) with a phone-controlled reader, tested with **153 adults**; **oral presentation, APHA 2026**.
- Lead reader development for a **$4.87M DoD (PRMRP)** point-of-care sepsis/ARDS project with Stanford, WashU, and UCSF.

Research Assistant Intern, Institute of Brain Science, BrainCo (Hangzhou, China) May 2022 – Aug 2022

- Conducted literature and competitor reviews, recruited volunteers, and collected data for a sleep-aid stimulator and an EEG fatigue monitor.

Undergraduate Research Leader, ZJU-UIUC Institute 2019 – 2021

- Led a national-level undergraduate research project designing a re-localizable remote-center-of-motion mechanism for minimally invasive surgery (**first-author paper, IEEE ICARM 2021**).

SELECTED PROJECTS

CRISPR Mechanism Explainer (Ashby Prize Hackathon, NCSA) — 1st Place Oct 2025

- Two-person team; found the public benchmark was almost all "hit" labels, rebuilt a balanced validation set with experimental context, and fine-tuned an LLM (Qwen3) to classify CRISPR screen outcomes and explain the mechanism; shipped a Gradio chat demo.

LLM-Automated Gravitational-Wave Workflow (Ashby Prize Hackathon) — Honorable Mention Apr 2024

- Five-person team; built a pipeline that uses the OpenAI API as a natural-language front end to classify gravitational-wave signals from black-hole mergers.

PUBLICATIONS

First author: pocket fluorescence reader manuscript (in preparation) · IEEE ICARM 2021. **Co-author:** 4 journal papers (*Chemical Reviews*, *Lab on a Chip*, *ACS Nano Medicine*, *Biosensors*) and 1 Elsevier book chapter. **Talks:** APHA 2026 (oral), LOAC 2026.

HONORS & TEACHING

1st Place, Ashby Prize Computational Science Hackathon, NCSA (2025) · National Silver Medal, China "Internet+" Innovation & Entrepreneurship Competition (2021) · TA, BIOE/ECE 415 Biomedical Instrumentation Lab (2025) and ME 170 Computer-Aided Design (3 semesters)

SKILLS

AI & Data: Python, LLM fine-tuning (Qwen3), OpenAI API, Gradio, image processing, curve fitting (4PL), MATLAB, Android (Kotlin)

Biosensing: lateral flow assays (competitive & sandwich), plasmonic-fluor labels, immunoassay optimization, ELISA, saliva/plasma sample prep, fluorescence imaging, human-sample studies

Hardware: Raspberry Pi, ESP32, Arduino, LabVIEW, IMU sensors, fluorescence optics

Languages: English (fluent), Chinese (native)
